REVIEWER INDEX

to Volume 112, January–April, 1986

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 112.

The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this, we depend heavily on our reviewers, who perform this indispensible service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

AKIN, E.
ALLENDORF, F. W.
ANDERSON, L. E.
AQUADRO, C. F.
ARNOLD, J.
ARTAVANIS-TSAKONAS, S.

BAKER, B.
BELOTE, J.
BENDER, W.
BENYSHEK, L.
BERGER, E.
BOYD, J. B.
BROWN, A. H. D.
BURR, F. A.

CALDECOTT, R.
CAMPBELL, A.
CANN, R.
CAVENER, D.
CHAKRABORTY, R.
CHAKRAVARTI, A.
CHARLESWORTH, B.
CHERBAS, P.
CLARK, A. G.
CLARK, S. H.
CLINE, T.
COCKERHAM, C. C.
COSTANTINO, R.
COX, E. C.
CRAYMER, L.
CREASE, T.

DECICCO, D. V.
DEMPLE, B.
DESALLE, R.
DICKINSON, W. J.
DREXLER, H.
DUTTON, F. L.

EANES, W. F.
EICHER, E. M.
ENDOW, S.
ENFIELD, F. D.

SUBJECT INDEX

to Volume 112, January–April 1986

Actin, genes, study of organization, 27
Adaptive response, *Escherichia coli* gene induction, 11
Alcohol dehydrogenase
  molecular genetic characterization, *Drosophila mojavensis*, 295
  tissue-specific variants, Drosophila, 523
Alfalfa, winter-hardy, breeding, 1
Alkylating agents
  Escherichia coli gene induction, 11
  somatic mutagenesis, transposon-caused *white* alleles in Drosophila, 505
Allelic lethals, variation in, 43
Allozyme variation, temporal and microgeographic, *Drosophila buzzatii*, 577
Alpha-methyldopa, resistance, Drosophila, 249
Aminoacyl-tRNA limited cells, frameshift suppression in, 727

Bacteriophage lambda
  IS*50*-encoded transposase, 421
  recombination products, 409
Bicaudal, production of double-abdomen embryos, *Drosophila melanogaster* and, 803
Brachydanio rerio, 311
Brink, Royal Alexander, 1

Caenorhabditis elegans, 459
Catecholamines, metabolism, diphenol oxidase gene in, Drosophila, 823
Centromere, UV-induced reciprocal translocations, *Sordaria macrospora*, 183
Centromeres, evolution of restricted recombination, repeated DNA sequences and, 947
Chi recombinational hotspots, activity in *Salmonella typhimurium*, 429
Chlorophyll A/B binding protein, localization of DNA restriction fragments, tomato, 93
Chromosome *3R*, Drosophila, deficiency analysis of, 539
Complementation, simple lethal group, heterogeneity of lethals in, 43
Cytoplasmic selection, polymorphism for, bisexual plants, 385

Dictyostelium discoideum, actin multigene family in, study of organization, 27
Diploidization, *Drosophila melanogaster*, 237
Disequilibrium, weak epistasis, 157
Dispersal behavior, Drosophila, 229
DNA
  heteroduplex, products of lambda recombination, 409
  markers, tomato, 887
  mitochondrial
    divergence, tomato, 649
    genetic variation in, Limulus, 613
  polymorphisms and duplications, study of actin genes in, *Dictyostelium discoideum*, 27
  recombinogenic, zeta-globin locus of man, 79
  repair
    Drosophila, 505
    Escherichia coli and, 11
  repeated, recombination and, 947
  restriction fragments, mapping of, tomato, 93
  ribosomal polymorphism, abnormal abdomen syndrome and, *Drosophila mercatorum*, 861, 877
  rosy-locus, *Drosophila melanogaster*, 755
  sequence
    evolution, 923
    evolution, transposable element families, model, 393
  sequences, human fetal globin gene, 343
Dopa decarboxylase, regulatory variants of, Drosophila, 249
Dopa decarboxylase region, diphenol oxidase gene, Drosophila, 843
Dosage compensation, specific transcript, *Drosophilia melanogaster*, 483
Drosophila
  melanogaster, 493, 505, 539, 551, 755, 769, 785, 803
    cSOD microregion in, 205
    dosage compensation, 483
    genetics of pathogenesis, 237
    Gpdh allozymes, temperature, 267
    heterogeneity of lethals, 43
    Rosy-Ace action, molecular genetics, 65
    temperature-dependent expression of, 217
  mercatorum, 861, 877
  mojavensis, 267

persimilis, 229
phenol oxidase in, 823, 843
pseudoobscura, 229
regulatory variants in, 249
tissue-specific ADH variants, 523
Dysgenesis, hybrid, evolution of transposable elements, 359

Elements, transposable, self-regulated transmission, 359
Enzyme polymorphism, *Drosophila buzzatii*, 577
Epistasis, weak, multilocus models, 157
Escherichia coli, 409, 421, 429, 441
gene induction, alkylation treatment and, 11
two-locus neutrality test, 135
Escherichia coli negative dominant mutations, 173
Evolution
allelic correlation structure, Gainj- and Kalam-speaking people, 629
concerted, biased gene conversion, 681

Fertility, selection, differences between matings, 909
Flight metabolism, genetic variability, *Drosophila melanogaster*, 267
Frameshift errors, context rules of, 727
F-statistic analysis
population structure
Drosophila buzzatii, 577
Gainj- and Kalam-speaking people, 629

Gene
conversion
human fetal globin gene, 343
interchromosomal biased, multigene family, 681, 699
duplication, *Drosophila mojavensis*, 295
glue, chromosome *3* of *Drosophila melanogaster*, 785
interactions, Drosophila, 551
mapping, *Drosophila melanogaster*, *rosy-Ace* region, 64
Genetic systems, evolution of, 909
Genome, organization, catecholamine metabolism and sclerotization in Drosophila, 843
Genotypes, parental and progeny, Monte Carlo studies of plant mating system, 927
Globin genes
DNA length polymorphism in man, 79
human fetal, short gene conversions in, human, 343
β-Glucuronidase, mutants, *Caenorhabditis elegans*, 459
GPDH activity, allozymes, temperature, *Drosophila melanogaster*, 267
gus-1, structural locus for β-glucuronidase, *Caenorhabditis elegans*, 459

Heavy metals, Drosophila, 493
Heterogenous environments, selection of, Drosophila, 229
Histocompatibility loci, *Escherichia coli*, lodgepole pine and, 135
Homozygosity test, change in population size, 899
Horseshoe crab: *see* Limulus
Housefly, genetics, 469
Human tribal populations, allelic correlation structure, 629

Imaginal discs, temperature dependent expression, *Drosophila melanogaster*, 217
Immunity, transposition, transposable elements, 359
Invertase, expression, regulation of, 741
IS*50*, transposase protein, localization of action, 421

Lethal mutations, heterogeneity of, 43
Life history traits, abnormal abdomen syndrome, *Drosophila mercatorum*, 861, 877
Limulus polyphemus, genetic variation in, 613
Linkage, gene-centomere, zebrafish, 311
Linkage disequilibrium, biased gene conversion, 681
Lodgepole pine, two-locus neutrality test and, 135
Lycopersicon esculentum, 887

Maize
Ds-induced alleles, *Opaque-2* locus, 121
Mu transposable elements of, 107
open-pollinated, nonrandom mating, 669
Mapping
molecular, deletion, mouse, 321
recombination and molecular, *Drosophila melanogaster*, 769
Maternal-effect, sex-transformation mutant, housefly, 469
Mating
nonrandom, maize, 669
plant models, Monte Carlo studies, 927

Metallothionein, Drosophila gene, 493
Modifier theory, fertility selection, 909
Molecular drive, biased gene conversion, 681
Multigene families, biased gene conversion in, 681, 699
Multilocus models, selection, weak epistasis, 157
Mutagenesis
  induced lesions in, *Drosophila melanogaster*, 769
  new lethal mutations, *Drosophila melanogaster*, 785
  somatic, transposon-caused *white* alleles in Drosophila, 505
Mutants
  β-glucuronidase, *Caenorhabditis elegans*, 459
  male-less, Drosophila, 483
  sex-transformation, housefly, 469
Mutations
  dilute, mouse, 321
  lethal, *Drosophila melanogaster*, 785
  maternal effect, *Drosophila melanogaster*, 803
  negative dominant, *Escherichia coli*, 173
  rates, evolution of, 909
  retroviral insertion, mouse, 321
  temperature-sensitive, *Drosophila melanogaster*, 217
Mutator, *Mu* transposable elements of maize, 107

Neutrality, two-locus test, *Escherichia coli*, 135
Neutral mutation hypothesis, 899

Opaque-2, *Ds*-induced alleles at, maize, 121
Organelle, evolution, tomato, 649

Pairing, meiotic chromosomal, human fetal globin gene, 343
Paramutation, corn, 1
Phenol oxidase, Drosophila, 823, 843
Pleiotropy, two additive characters, 717
Pleitropy, abnormal abdomen syndrome, *Drosophila mercatorum*, 861, 877
Polarity, insect embryos, *Drosophila melanogaster*, 803
Polymorphism
  chromosomal, Drosophila, 229
  DNA length, zeta-globin locus of man, 79
  enzyme, *Drosophila buzzatii*, 577
Populations
  natural, Drosophila, 229
  size, change in, 899
Purine auxotrophy, simple lethal complementation group, 43
P-VV, variegated pericarp, 1

RecA, recombination substrate requirement, *Escherichia coli*, 441
RecBC, recombination substrate requirement, *Escherichia coli*, 441
RecBC enzyme, Chi recombinant hotspots, 429
RecF, recombination substrate requirement, *Escherichia coli*, 441
Recombination
  generalized, *Escherichia coli*, 441
  homologous, *Salmonella typhimurium*, 429
  intragenic, *rosy* intragenic deletions, 755
  restricted, evolution of, repeated DNA sequences and, 947
  undetectable events, frequency of, 923
Repair, mismatch, products of lambda recombination, 409
Repression, transposition, transposable elements, 359
Rosy-Ace region, *Drosophila melanogaster*, molecular genetics of, 65
rRNA genes, mapping of DNA restriction fragments, tomato, 93
RUBP carboxylase genes, DNA restriction fragments, tomato, 93

Saccharomyces cerevisiae, 741
Salmonella typhimurium, 429
Sclerotization, diphenol oxidase gene in, Drosophila, 823
Selection, stabilizing, additive variation, 717
Self-fertilization, polymorphisms for cytoplasmically inherited traits, 385
Sex determination, housefly, 469
Sexual asymmetry, cytoplasmic selection, 385
Slime mold, actin genes in, 27
snf 2, suppressors of, 741
Sordaria macrospora, UV-induced reciprocal translocations in, centromere regions, 183
SUC: see Invertase
Superoxide dismutase
  cytogenetic analysis, *Drosophila melanogaster*, 205
Synaptonemal complexes, centromere regions, *Sordaria macrospora*, 183

Telomeres, evolution of restricted recombination, repeated DNA sequences and, 947
Temperature, sensitivity, suppressors of *snf* 2 in yeast, 741
Tn*5*, *Escherichia coli*, 421
Tomato
  cDNA linkage map in, 887
  mapping of DNA restriction fragments, 93
  mtDNA divergence, 649
Translocation, UV-induced reciprocal, *Sordaria macrospora*, 183
Transposable elements
  DNA sequence evolutions within, model, 393
  Mu, maize, 107
Transposase, Tn*5*, 421
Transposing element, Drosophila, 539
Transposition, during development, maize, 107
Transposon, unstable *white* allele, DNA repair dependence, Drosophila, 505
Transposon mutagenesis, *Ds*-induced alleles, maize, 121

uidA gene, regulation of expression, *Escherichia coli*, 173
uidR gene, regulation of *uidA* expression, *Escherichia coli*, 173

Variants, regulatory, Drosophila, 249
Variation, additive, maintained under selection, 717

Wing size, flight ability and, *Drosophila melanogaster*, 267

Xanthine dehydrogenase
  low, *Drosophila melanogaster*, 205
  molecular mapping, *rosy* locus in *Drosophila melanogaster*, 769

Zebrafish: *see Brachydanio rerio*
Zeste-white interactions, Drosophila, 551
Zeta-globin genes, DNA polymorphism in man, 79
